Reenabling the switch fabric and verify operation 1

Reenabling the switch fabric and verify operation

You must enable the FC switch fabric and ensure that the switches and devices are operating correctly.

Steps

1. Enable the switches:

switchCfgPersistentEnable

If this command is not available, the switch should be in the enabled state after the **fastBoot** command is issued.

The following example shows the command issued on **FC_switch_A_1**:

```
FC_switch_A_1:admin> switchCfgPersistentEnable
```

The following example shows the command issued on **FC_switch_B_1**:

```
FC_switch_B_1:admin> switchCfgPersistentEnable
```

2. Verify that the switches are online and all devices are properly logged in:

switchShow

The following example shows the command issued on **FC_switch_A_1**:

```
FC_switch_A_1:admin> switchShow
```

The following example shows the command issued on **FC_switch_B_1**:

```
FC_switch_B_1:admin> switchShow
```

3. Run the **fmc_dc utility** to ensure that the 7-Mode fabric MetroCluster is functioning correctly.

You can ignore errors related to Traffic Isolation (TI) zoning and trunking.

4. Repeat the tasks for the second switch fabric.
